DIRECTIONS FOR ORDERING.

Time, Annoyance and Expense can be Saved by Noting and Following Closely the Suggestions Below:

We will understand all orders and inquiries as calling for **Regular Western Style** and **Sizes** as described in this catalogue, unless specifically ordered otherwise, or unless covered by standing instructions to the contrary.

Be Explicit in ordering. Do not assume that we know what you want.

Always give **width** first, length or height second, then thickness.

Always use inches to designate glass sizes, and feet and inches for openings or outside measurements.

SASH and WINDOW.

The term "Sash" indicates only one piece to fill opening.

The term "Window" indicates two pieces (upper and lower sash).

State size of glass, number of lights, opening (unless regular stock) and thickness. State whether open or glazed, and if glazed whether of single or double strength.

If a window whether check or plain rail.

If segment or circle head give number of style desired (see page 9) and radius of circle or segment if not regular. When not otherwise specified we will understand for Circle Head Style No. 2 with a radius one-half the width of the sash less the width of the stile, and for Segment Head No. 4 with a radius the width of the sash less the width of the stile.

When an odd sash or window is ordered always give both glass size and number of lights and outside opening, and if possible send sketch.

If glass sizes only are given we will understand that regular stock widths of stiles, rails and bars are required.

Note—All windows and sash are understood to be glazed unless ordered open specifically. All glazed windows are primed or oiled one coat unless otherwise ordered.

DOORS.

In the absence of fuller instructions we will consider an order or inquiry for doors to call for the Standard Four Panel O. G. Door No. 1 quality.

State width, height and thickness, number of panels and arrangement of same and quality.

If molded state whether flush or raised mold one or two sides.

State style of sticking unless O. G. is desired.

If oil finish state whether machine smoothed or hand smoothed is desired.

If odd send sketch or detail.

Odd doors will be made with regular stock widths of stiles, rails, muntins and panels unless specifically ordered otherwise.

OUTSIDE BLINDS.

We will understand all orders for blinds to call for Regular Western Stock Styles and Sizes, 1⅛ inch rolling slats unless specifically ordered otherwise.

State size and number of lights of window for which blinds are ordered, also thickness of blind, and whether all rolling slats (R. S.), stationary slats (S. S.), or half rolling and half stationary (½ R. S. ½ S. S.)

If odd give outside opening, thickness, arrangement of slats and send sketch.

The regular stock blind is the width of the window to be covered and 1 inch longer.

Orders for brick buildings must so specify, and will in the absence of additional instructions be made two inches longer than window opening.

A blind indicates a single piece to fill opening.

A pair of blinds indicates two pieces to fold together to fill opening.

A set of blinds indicates more than two pieces, and should always be accompanied by sketch.

INSIDE BLINDS.

Inside blinds we will understand are to be made four-fold, 1⅛ inch thick, outside panel and inside slats; made to be cut in the center unless otherwise stated.

Give exact outside opening always, thickness, number of folds and arrangement of panels or lats.

If cut twice or more specify height from top to each cut.

If wanted to fold into box give width of outside folds.

If not the usual arrangement of panels or slats (see page 66), always send sketch.

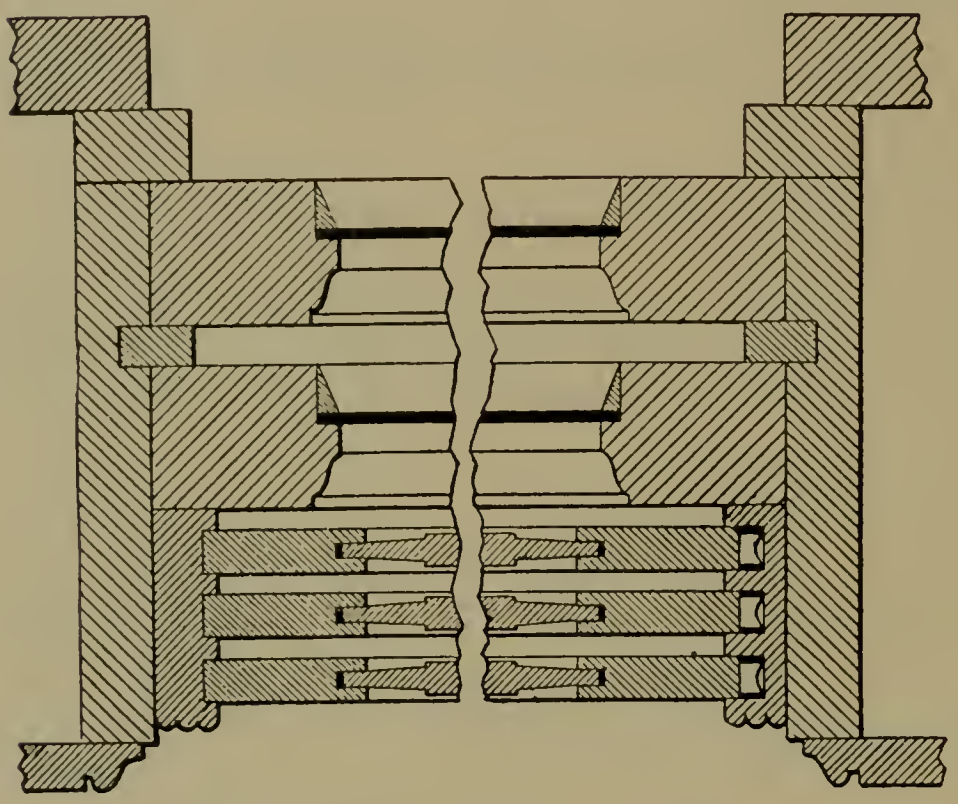
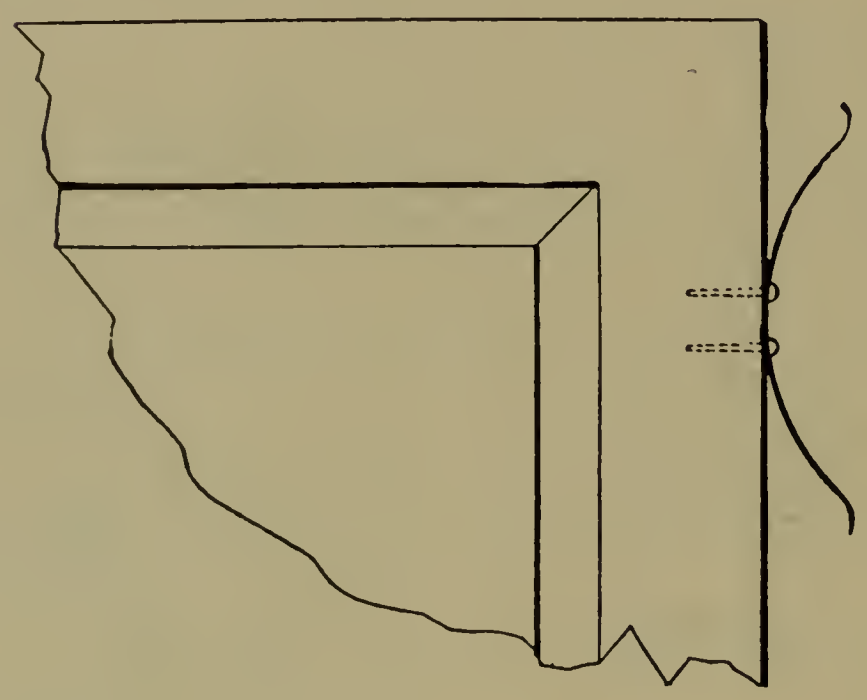
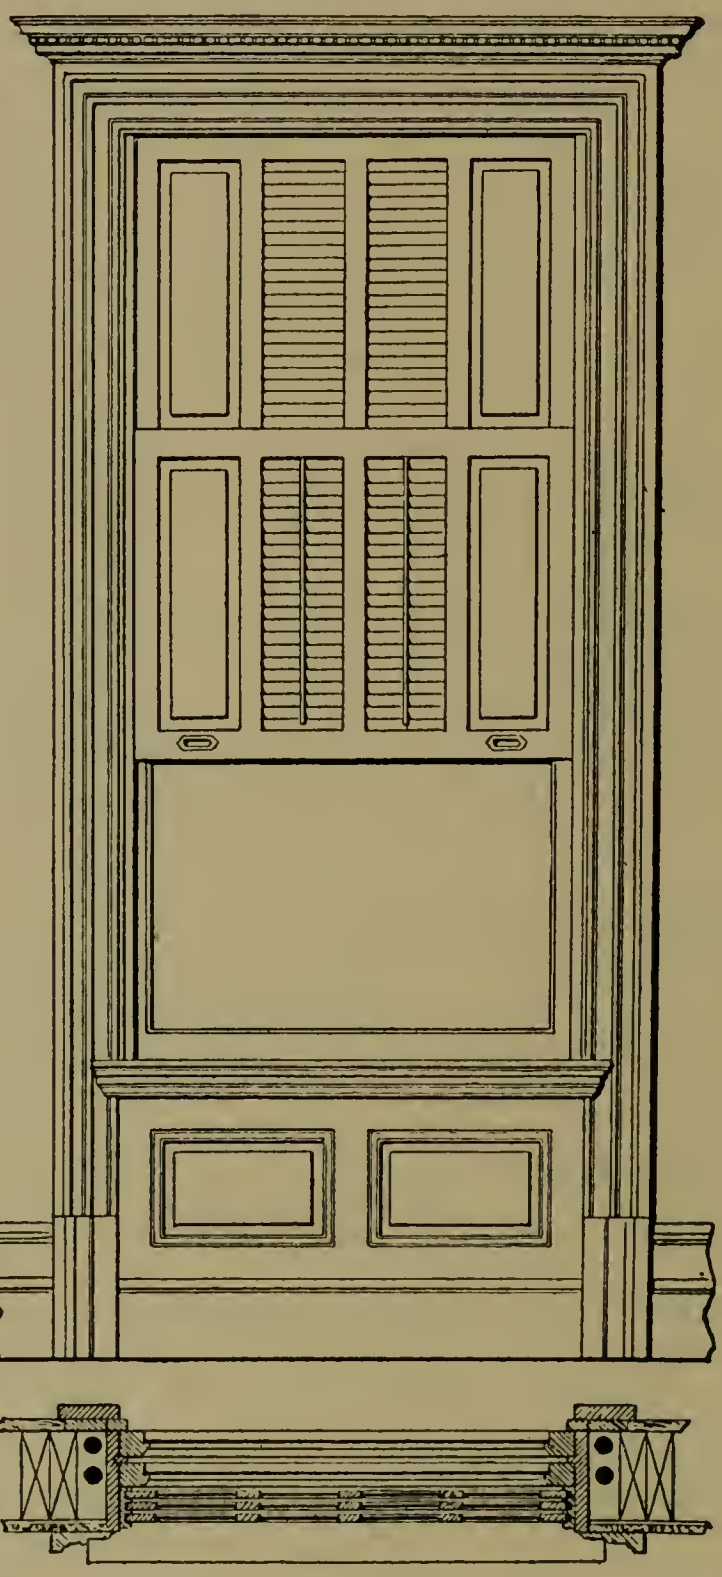
INSIDE SLIDING BLINDS.







Above section shows that no special frame is required to use our sliding blinds. The guideway is fastened on pulley stile, acting as a stop for the sash.

These sliding blinds are made ½ inch in thickness, and though constructed of light material possess great strength and lasting qualities.

Can be closed with the window raised and cannot blow open or rattle, thus giving the best medium of ventilation.

They do not interfere with curtains or window ornaments, and admit light and air from any part of the window.

These blinds are specially made to order in the white or finished complete; either varnished in the natural colors of the different woods or stained and varnished, or wood filled and cabinet or rubbed finish.

DIRECTIONS FOR ORDERING.

Give the exact measurement of the opening which the blinds are to fill. Full information for adjusting these blinds accompany each order.

VICTORIA VENETIAN BLINDS.

Essential improvements over all others. Made to order only.

Are made of thin wood slats hung on the best woven ladder tape; hang within window frames, between jambs or stop beads; are never swinging out in the room, "sticking fast" or "coming off the roller," and are perfectly noiseless, both in use and operation. Can be hung in old as well as new buildings by anyone.

It is seen that all the slats or any part of them can be instantly adjusted to admit light and air the full width and height of a window, or exclude it from the top, bottom or any part.

Are perfectly sanitary and can be as easily kept clean as any other piece of furniture.

Shows one of the many handsome effects that can be produced draping windows equipped with them. They are made from plain and fancy woods, finished natural, painted or enameled any color or tint desired, to match the finish of a room or building.

FIVE WAYS THE SLATS CAN BE ADJUSTED, AND STILL THERE ARE OTHERS.

No. 1, shows all slats closed.
No. 2, blinds half drawn, upper slats closed.
No. 3, lower slats closed, upper open.
No. 4, blinds entirely drawn.
No. 5, all slats turned to exclude the sun, and still admitting an abundance of light.

Made with slats 2 inches and also 2⅜ inches wide. The former are intended for medium-sized windows in residences, etc. The latter width costs less, makes a lighter blind, and are intended for larger windows, such as are found in public buildings, etc. Either width is well adapted for any use.

For list prices see page 71.

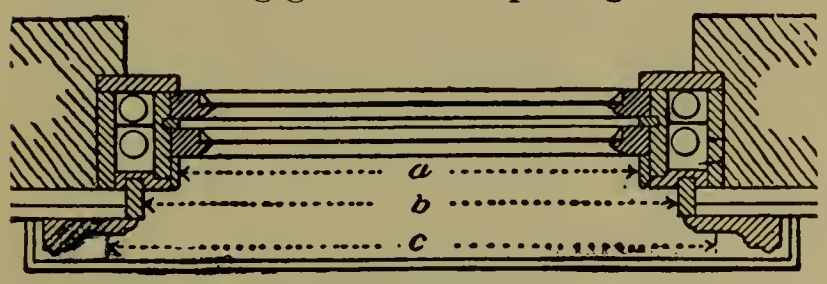
Bronzed hardware lists at 25 cents per blind extra.

Where no preference is stated the blinds will be made from basswood, with slats 2 inches wide, which makes a very handsome blind.

Sliding Venetian Blinds also roll head blinds with or without tenoned slats cost extra.

In ordering give size of opening.

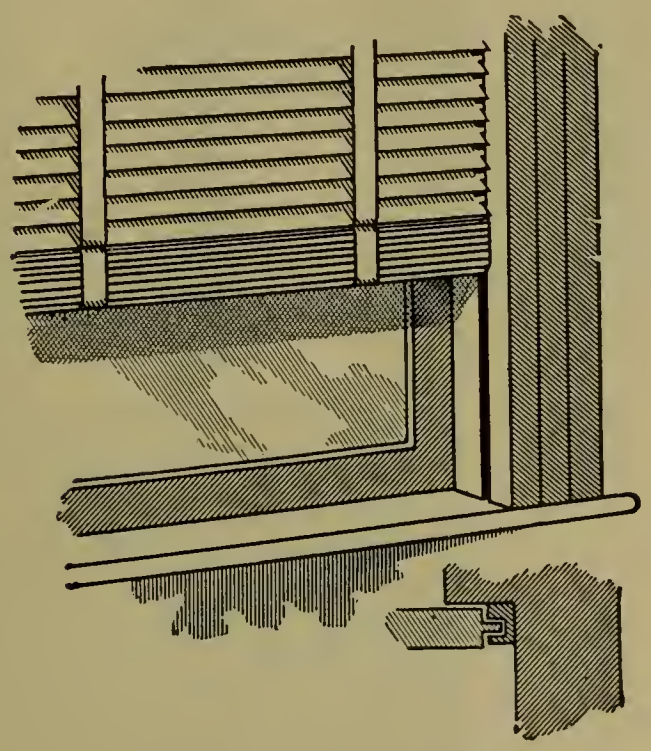


Reference can be made to the above cut to describe where dimensions are taken by saying if taken at "a", "b" or "c", and if taken at "c" how much lap was allowed on face of casing.

a—Between stop beads.

b—Between jambs.

c—Face of casing and tell how much if any lap has been allowed on each side.

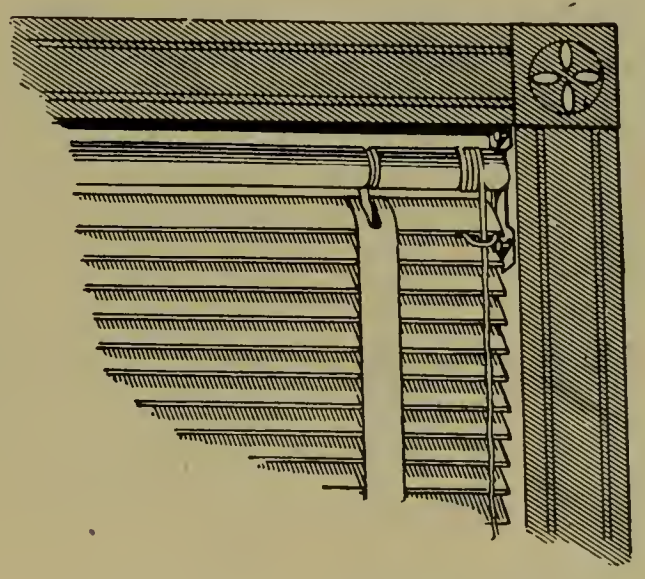


Above cut illustrates how the slats can be tenoned on the ends to work in Rabbeted Guides, which we furnish for each side.

The guides keep blinds in place before an open window and are finished same as blinds and can be placed on stop beads or jambs, or used for window stops.

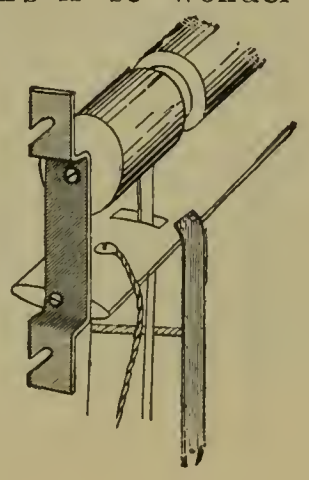
ROLL HEAD BLINDS.

Are made with and also without tenoned slats. Have narrow strips of metal down through the slats instead of cords, concealed behind the tape. When raising a blind these metal strips wind around the ROLL HEAD and at the same time the raising cord at the right unwinds thus keeping the slats perfectly horizontal.



The advantage of metal over cord is apparent and also makes a great difference in ease of operation.

To hang ROLL HEAD BLINDS is so wonderfully simple it is simply wonderful the way has not been used before; it is only necessary to put the slotted irons, attached to the blind on each side, over two screws previously placed in the stop beads or jambs.



The blind can be taken down by simply lifting it off the screws.

DIRECTIONS NECESSARY FOR ORDERING STAIRS and STAIR RAILING.

When a flight of stairs is wanted, we should know the height of story from top of finished floor to top of finished floor, width of joists in second story, width and run of stairs, the size of cylinder, style of base used in the hall, with rough sketch showing about the shape of stairs wanted, and measurements of rooms on first and second floor where stairs are located; measurements taken inside plaster line.

For STAIR RAILING—Straight Flight.

We require the width of rise and step as sawed out on string board, the number of risers, the size of cylinder from face to face of string or face board, which way it turns at head of stairs, and the number of feet of straight rail required at landing. Unless we receive plan showing otherwise, we always suppose the top riser for a straight flight of stairs to be placed at the edge or spring of cylinder.

For CIRCULAR or WINDING STAIRS.

We should have an exact plan of stairs as built, giving the width of rise and step, the location of risers in cylinder, etc.; and, when there are straight steps below or above the cylinder, always give the distance from the first square riser to the edge or spring line of cylinder, on the face of string or face board. *Always write your address in full on the plans.*

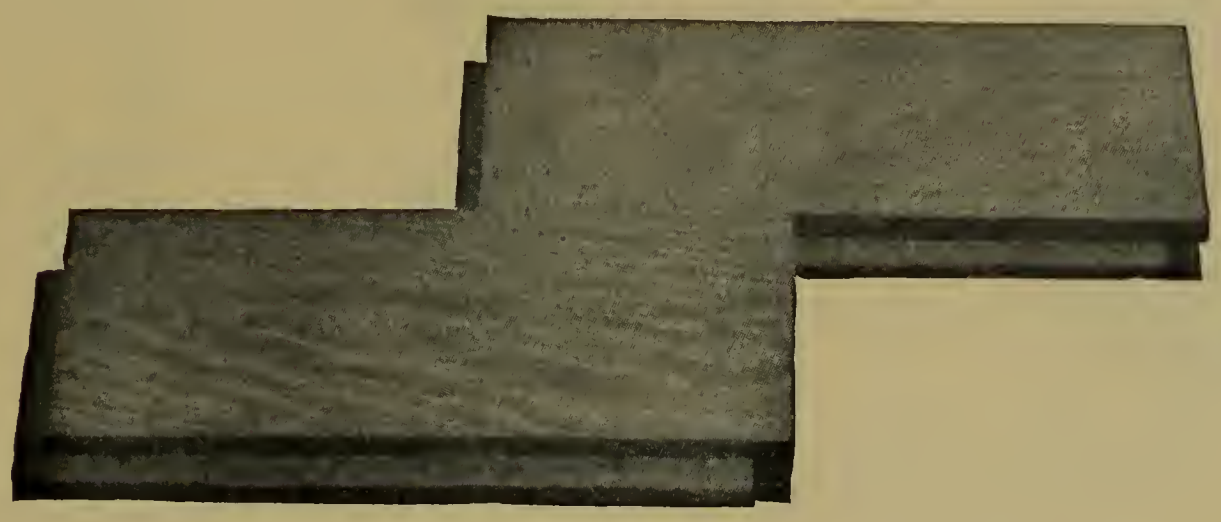
HARDWOOD FLOORING.

Plain and Quarter Sawed Oak (Red or White) Maple, Cherry and Walnut,
Dressed and Matched.



Regular Thickness is ⅜ and ⅞ inches, Length 2 to 16 Feet.

THE STANDARD WIDTHS OF OUR FLOORING ARE AS FOLLOWS:

The 2¾ inch rough is worked 2 inch face
" 3 " " " 2¼ " "
" 4 " " " 3¼ " "
Three-quarters of an inch allowed for all matching in flooring ½ inch and thicker.

WEIGHTS OF FLOORING.

⅜ Inch Flooring weighs 1000 pounds per 1000 ft.
⅞ " and thicker " 2500 " 1000 ft.

Hardwood floors are healthful, handsome and economical. With modern appliances, are easily kept clean and the natural beauty of the wood retained. Are cheaper than carpets and when used in connection with rugs, give a very handsome effect in the furnishing of the modern home.

This ⅜-inch dressed and matched flooring takes the place of the old fashioned thick flooring; is cheaper in price, easier laid and wears for all time. With ordinary care given hardwood flooring, you do not even wear through the finishing of the floor, let alone wearing out the floor. Consequently, ⅜-inch flooring is supplanting thick floors and is laid on linings to form new floors in new houses.

But, the special features of the ⅜-inch flooring is its adaptability in covering old floors, doing away with the soft floor and carpets, and giving a strictly "hygienic" floor, attractive, beautiful, lasting and finished in the natural wood.

Our flooring is run with a polished surface, tongued and grooved matched ends and holes bored for blind nailing, so that the question of laying and finishing a hardwood floor is now reduced to a minimum, as it is end matched any lengths, however short, can be utilized and the floor laid as substantially as though in one piece.

Maple flooring has no rival for durability and is used in office buildings, schools, public halls, churches, dwellings stores, etc. Oak flooring, while adapted to all the uses of Maple, is used largely in living rooms, sleeping apartments of the modern house, and is a wood of so much beauty and utility and so well known as to require but little description.

We furnish the Oak flooring in plain and quarter-sawed. Walnut and cherry are handsome woods to lay in conjunction with either Oak or Maple, forming fancy floors, as the cuts on the following pages suggest.

The finishing of hardwood floors is simple and the amount of attention required to keep the floor in perfect order is less than sweeping old fashioned carpets.

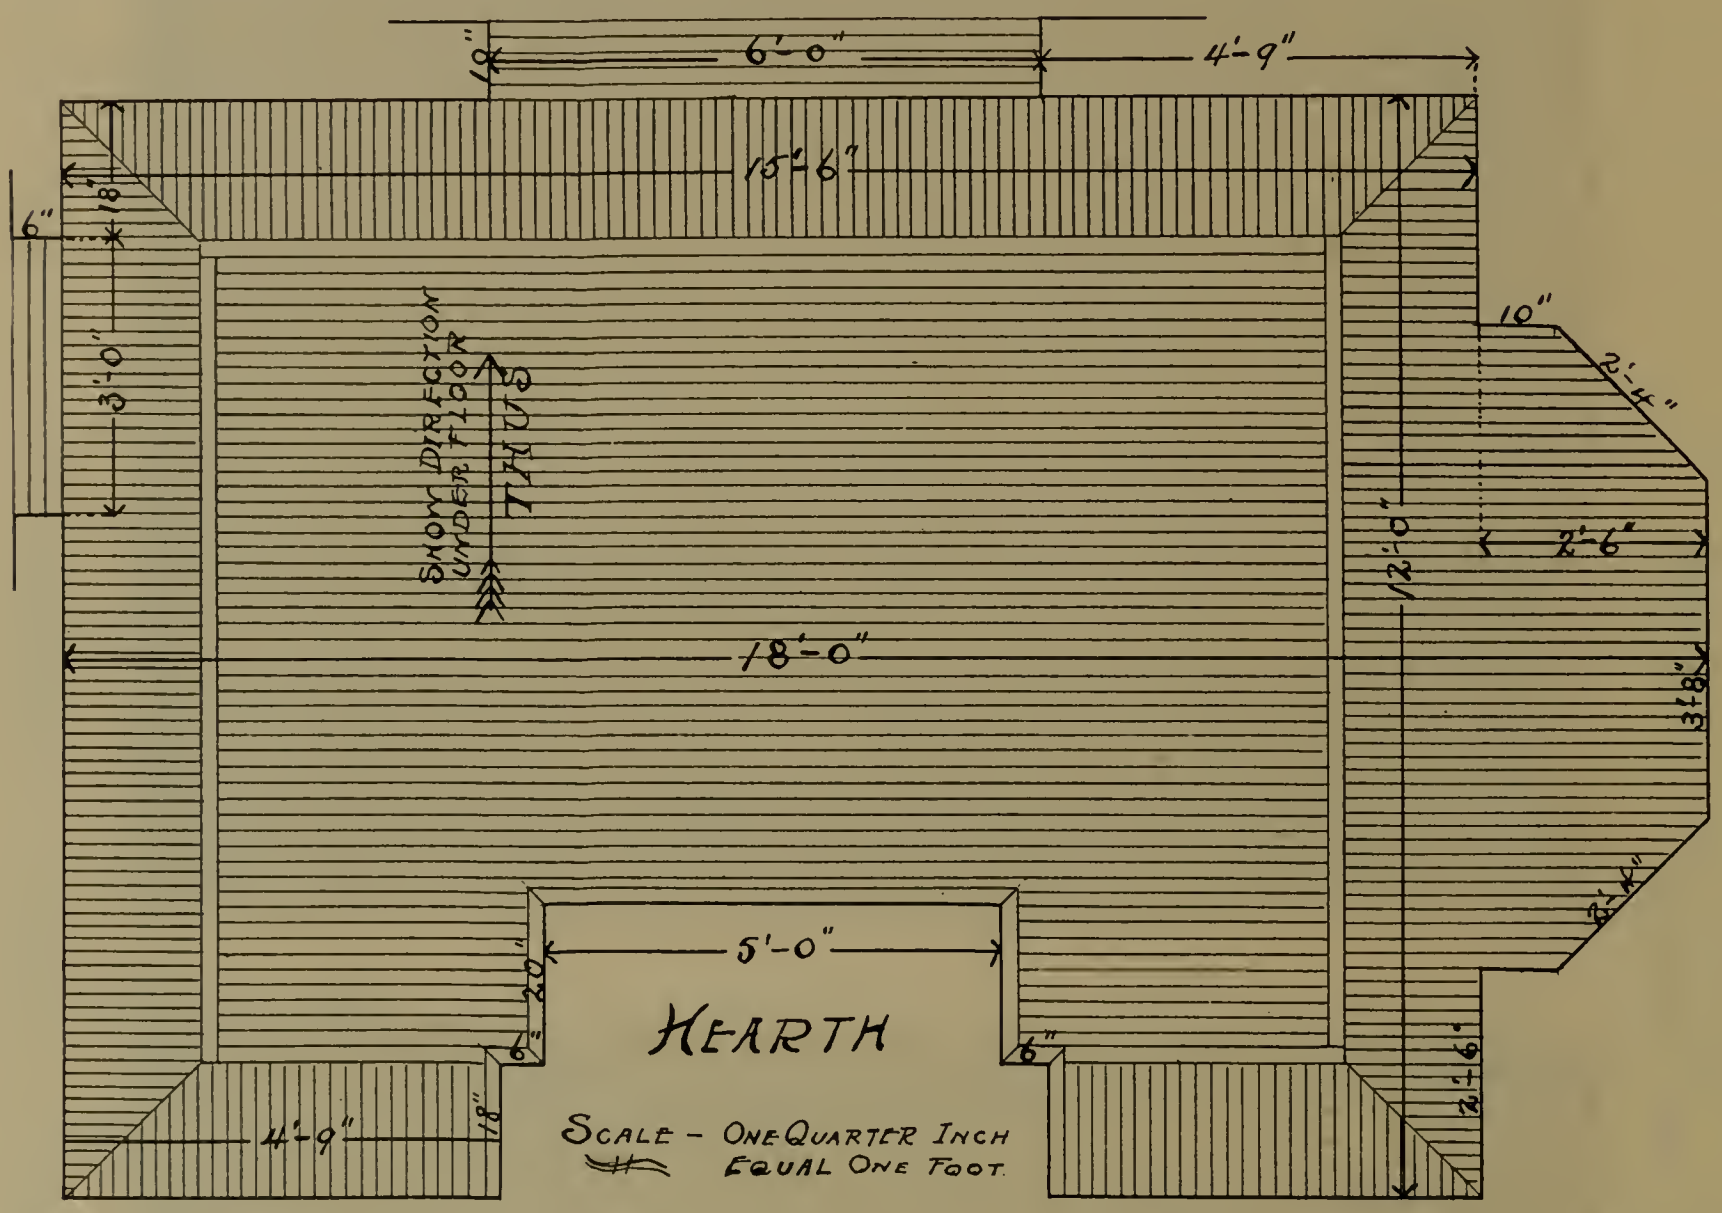
Directions for Measuring

Give each distance separately where the wall is broken by bay window or hearth, and in addition mark the extreme length and width. Mark the direction of the under floor so that our material may be planned to run in opposite direction.



Directions for Laying and Finishing

Remove the quarter-round, and measure off on the floor the plan, as shown in the working drawing, which we supply with our material.

Drive 1¼ inch No. 15 wire brads in rows about 9 inches apart, placing a brad at each edge of each slat, then with a punch, sink each brad about $\frac{1}{12}$-inch below surface of the wood.

Go over the floor carefully with a steel scraper wherever uneven joints or roughness is found, or any hammer marks appear, after which sand the surface with No. 1½ sandpaper, first with the grain, then across. A Weighted Floor Brush with sandpaper under will lighten this work.

Putty each brad hole to match the wood then sand again lightly to clean the surface of filler and putty marks.

Clean off the floor carefully, then apply Paste Wood Filler with a brush going over no more surface than will admit being cleaned off before hardening. After the Filler is set, rub off with cloth or excelsior, allow the Filler twelve hours at least to dry.

Wipe the floor off thoroughly, and apply a coat of Shellac or best Floor Varnish, then polish with "hard wax" finish, rubbing first across the grain and with the grain afterwards. The Weighted Floor Brush (25 pounds) is necessary for this polishing.

The continued use for over ten years of the Double Draft Portable Grates, or Fireplaces, has proven that they are the most *economical*, *practical* and *satisfactory* fireplaces made. They have the advantage over the regular common brick setting in that they are:

A complete Grate all mounted, ready for setting. They require no fire brick or fire tile in setting. They can be set by any mason. They prevent smoky chimneys and puffing of smoke into the room. The dampers can be so operated as to control the fire. By opening the lower damper which is directly over and close to the fire, it forms a strong direct draft, which as soon as it heats the flue, forms a rapid current of air, thus carrying off the dense smoke. When the fire is well under way, the lower damper can be closed, the upper one remaining open. The heat is then reflected into the room. The upper damper is arranged to close in the summer to prevent dust and soot from coming into the room, and is so constructed as to be opened any desired width to control the fire.

Outfits include: **Facing**—Best quality enameled or unglazed tile (any color).
Hearth—60 x 21 inches; best quality enameled or unglazed tile (any color).

IMPORTANT NOTICE.

When moulding is priced by the inch *it is in all cases understood* that the price is based on ripping width of lumber, that is: ¼ *of an inch wider than the finished size* of moulding. For example: A ⅞ inch thick panel moulding if made to finish 1¾ inches wide, would be charged as 2 inches (being ripping size); to finish full 2 inches, would be charged as 2¼ inches, etc.

Approximate weight of Mouldings, 1x1 inch, per 100 lineal feet, 15 pounds.
